

# **TECHNICAL DATA SHEET**

# INSTANT ADHESIVE BLACK SEMI-GEL • RUBBER TOUGHENED

# PART NO. CA500RT

# **DESCRIPTION**

CA500RT is a black, medium viscosity, rubber-toughened ethyl instant adhesive. It provides superior shock and thermal resistance when bonding rubbers, metals, and plastics in harsh environments, and displays excellent strength and flexibility on a variety of substrates.

# **PHYSICAL PROPERTIES**

Technology / Base	Modified Ethyl			
Type of Product	Cyanoacrylate			
Components	One Component			
Curing	Humidity			
Appearance / Color	Black			
Consistency	Semi-Gel

## **INSTRUCTIONS**

Surfaces to be bonded should be clean and dry. Dispense a drop or drops to one surface only. Apply only enough to leave a thin film layer after compression. Press parts together and hold firmly for a few seconds. Good contact is essential. An adequate bond develops in less that one minute and maximum strength is attained in 24 hours. Wipe off excess adhesive from the top of the container and recap. Products, if left uncapped, may deteriorate by contamination from moisture in the air. Because products cure by polymerization, whitening may appear on the surface of the container or the bonded materials. This will not affect adhesive performance.

## **CURING PERFORMANCE**

Ambient surface moisture initiates the curing process. Handling strength is reached in a short time, and will vary based on environmental conditions, bond line gap, and other factors. Product will continue to cure for at least 24 hours before full strength and solvent resistance is developed.

#### **STORAGE**

Containers should be stored in a cool, dry, dark area. Storage temperature  $15.5^\circ\text{C}$  -  $25^\circ\text{C}$  (60°F -  $77^\circ\text{F}$ ), without exposure to direct light or heat. Do not refrigerate.
